

Exercise: Unit Testing

This document defines the exercises for the ["Python OOP" course at @Software University](#).

Please, submit your source code solutions for the described problems to the [Judge System](#).

In this exercise, everyone should use the source code (**skeleton**) written for each of the **four problems (01. Mammal, 02. Vehicle, 03. Hero, and 04. Student)** from the **Testing exercise**. You have the structure and functionality of the classes, and now you should **test** them. You are **NOT ALLOWED** to change the class. Cover the whole class with unit tests to make sure that the class is working as intended.

Submit **only the test** folder.
